PROJECTS

AutoHub- Integrated Vehicle Sales and Rental Management System

- Developed a user-friendly online platform using MERN Stack that makes it easy for people to rent and buy Vehicles. Users can browse through lots of different vehicles, and see pictures, specifications, and pricing details about each one.
- Developed and deployed a system incorporates advanced search functionality, allowing user to select vehicles based on their criteria such as make, model, price range, and specifications.
- The website offers transparent pricing, flexible rental durations, user-friendly renting process and ensure a stress-free buying process.

AeroReserve

- Developed a web application using PHP and MySQL that depicts online booking of tickets for an Airline Company through online.
- Customers can register to this site, and they can book their tickets to their destination. To confirm the booking of their ticket, a user must pay an amount for his booking. Administrator is the main user of this system he will be able to add new flights.

Acting Driver Locator Portal

- Developed a web application using PHP and MySQL that helps car owners locate drivers immediately.
- Users can book drivers through the portal, and the driver's fee is calculated based on the hourly rate.
